Associate practice questions — set 4

10 free questions for the Claude Certified Associate – Foundations exam (CCAO-F). The correct option and its reasoning appear under each question — read them through, or cover the answer block and treat it as a timed self-check.

Question 1 **Configuration and Knowledge Management**

A Project instruction says, 'Use the 2025 travel policy,' but the knowledge base now contains only the 2026 policy. What should be corrected?

A. Restore the obsolete 2025 policy and designate it as the Project's default source.

B. Retain the mismatch and allow Claude to choose between the instruction and knowledge.

C. Remove every travel-policy document so the Project has no conflicting source material.

D. Reference the current 2026 policy and verify that related examples remain valid.

Correct answer: D

Instructions and knowledge sources must remain mutually consistent and current.

Question 2 **Output Evaluation and Validation**

A generated email is accurate but uses technical acronyms that its customer audience will not understand. What is the best refinement?

A. Carefully rewrite the email in customer-friendly language while preserving its verified meaning.

B. Add more technical acronyms so the customer perceives the message as authoritative.

C. Remove the supporting facts so unfamiliar details no longer appear in the email.

D. Change the intended recipient to an engineer instead of adapting the customer message.

Correct answer: A

Adaptation should improve audience fit without sacrificing correctness.

Question 3 **Workflow Integration and Solution Design**

A legal team wants research assistance but must retain approval and citation review. Which workflow design best fits?

A. Allow Claude to provide autonomous final legal advice without lawyer approval or review.

B. Use Claude for research organization and drafting, followed by lawyer verification and approval.

C. Remove source citations so the legal team can complete its review more quickly.

D. Use Claude only after the legal team has already sent its final advice.

Correct answer: B

The design augments preparation while retaining professional accountability for the final output.

Question 4 **Prompting and Task Execution** **Select all that apply**

An operations lead has examples of both acceptable and unacceptable incident summaries. Which two prompt additions will make those examples useful?

A. State the criteria that Claude should transfer from the examples to new incidents.

B. Include all the examples without indicating which summaries are acceptable or unacceptable.

C. Label the reasons each example succeeds or fails against the required standard.

D. Require Claude to reproduce the supplied examples word for word in new incidents.

Correct answer: A, C

Labels reveal the relevant differences between examples. Explanation for A: Explicit criteria help transfer those differences to new inputs.

Question 5 **Governance, Risk, and Responsible Use**

A marketing team wants to create synthetic customer quotations and present them as genuine testimonials. What is the main responsible-use concern?

A. The testimonials would be invalid because every testimonial requires more than one paragraph.

B. The testimonials would be invalid because Claude cannot support any marketing-writing activity.

C. The testimonials would be invalid because the team did not activate research mode.

D. The testimonials would deceptively attribute fabricated statements to real or implied customers.

Correct answer: D

Misrepresenting invented endorsements as real is deceptive, regardless of writing quality.

Question 6 **Product and Model Selection**

A routine tagging task must process thousands of short descriptions with tight cost and latency limits. Which model family is the sensible first candidate?

A. Start with Haiku, then validate its tagging quality on representative examples before scaling.

B. Start with Opus automatically without comparing performance, latency, cost, or quality requirements.

C. Avoid model use because short descriptions cannot be processed through automated tagging.

D. Start with Artifacts because an output feature can replace model-family selection entirely.

Correct answer: A

A fast, lower-cost model fits straightforward high-volume work, subject to task-specific evaluation.

Question 7 **Troubleshooting and Optimization**

A team improves a prompt, but cannot tell which edit caused the improvement because five instructions changed at once. What practice should it adopt?

A. Continue making several untracked prompt changes whenever the output appears to improve.

B. Change one variable at a time and record results against a test set.

C. Judge the revised prompt using one favorable example rather than representative test cases.

D. Discard the original baseline so later results cannot be compared with earlier performance.

C ClaudeMentor Associate track Pricing Log in

Correct answer: B

Controlled iteration preserves causal information and enables comparison.

Question 8 **Output Evaluation and Validation**

A recommendation is supported by correct facts but ignores a major downside contained in the source material. What should the reviewer flag?

A. Flag a spelling problem that can be corrected without reviewing the source evidence.

B. Flag a proven context-window failure without checking why the downside was omitted.

C. Flag a materially incomplete and potentially one-sided analysis that excludes material counterevidence.

D. Flag model selection alone without examining the prompt, sources, or evaluation process.

Correct answer: C

Omitting material counterevidence undermines completeness and may introduce bias.

Question 9 | **Configuration and Knowledge Management** | **Select all that apply**

Which two maintenance practices help a shared Project remain reliable over time?

A. Retain obsolete sources indefinitely and leave their current status undocumented for users.

B. Record material instruction changes so Project users understand what has been updated.

C. Allow every user to rewrite shared instructions without notice, ownership, or review.

D. Assign a Project owner and review knowledge sources according to a defined cadence.

Correct answer: B, D

Ownership and scheduled review reduce stale or conflicting knowledge. Explanation for B: Change records make configuration evolution visible and accountable.

Question 10 | Workflow Integration and Solution Design

A support workflow pilot is accurate but takes longer than the manual process because agents re-enter the same data. What should be redesigned?

A. Redesign integration and handoffs so validated data flows forward without redundant re-entry.

B. Redesign only the response tone while preserving the repeated manual data entry.

C. Redesign the company's vacation policy even though it does not affect the workflow.

D. Redesign only the brainstorming prompts without addressing the workflow's duplicated data entry.

Correct answer: A

Process optimization includes eliminating avoidable handoff work, not just improving generated text. END OF FLASH DRILL
