Question 1

Flag question

Correct Mark 1.00 out of 1.00

The most commonly overlooked pre-deployment prompt test is:

a. Behaviour on out-of-scope and adversarial inputs
b. Response length on typical requests
c. Factual accuracy on standard queries
d. Format compliance on common inputs

The correct answer is: Behaviour on out-of-scope and adversarial inputs

Question 2

Flag question

Correct Mark 1.00 out of 1.00

System prompts in production deployments must be:

a. Updated directly when quick fixes are needed
b. Stored separately from deployment infrastructure
c. Version-controlled and tested before deploying
d. Kept confidential from all team members

The correct answer is: Version-controlled and tested before deploying

Question 3

Flag question

Correct Mark 1.00 out of 1.00

Extended thinking mode is most appropriate for:

a. High-volume classification tasks
b. Complex multi-step reasoning problems ✓
c. Simple factual question answering
d. Creative writing tasks

The correct answer is: Complex multi-step reasoning problems

Question 4

Flag question

Correct Mark 1.00 out of 1.00

Self-consistency prompting is most useful for:

a. Formatting tasks requiring exact structure
b. High-volume batch classification tasks
c. Reasoning tasks where single outputs can be wrong ✓
d. Creative writing requiring variety

The correct answer is: Reasoning tasks where single outputs can be wrong

Question 5

Flag question

Incorrect Mark 0.00 out of 1.00

The most reliable way to stop Claude from opening with "Certainly!" is:

a. Naming the exact phrase to avoid
b. Reducing the temperature parameter
c. Instructing Claude to be more direct ✗
d. Using a more capable model version

The correct answer is: Naming the exact phrase to avoid

Question 6

Flag question

Correct Mark 1.00 out of 1.00

A prompt improves accuracy by 9% but reduces tone by 11%. The correct next step is:

a. Monitor in production before deciding
b. Revert immediately — net quality declined
c. Investigate alternative formulations that avoid the trade-off ✓
d. Deploy since accuracy matters more

The correct answer is: Investigate alternative formulations that avoid the trade-off

Question 7

Flag question

Correct Mark 1.00 out of 1.00

Critical constraints in a system prompt should be placed:

a. At the very end for emphasis
b. Near the top of the prompt ✓
c. Inline within the user message
d. Immediately before few-shot examples

The correct answer is: Near the top of the prompt

Question 8

Flag question

Correct Mark 1.00 out of 1.00

To stop Claude from adding unnecessary caveats, the prompt should:

a. Remove safety constraints from the prompt
b. Increase temperature to reduce caution
c. Specify when caveats are and are not appropriate ✓
d. Use a more confident model version

The correct answer is: Specify when caveats are and are not appropriate

Question 9

Flag question

Correct Mark 1.00 out of 1.00

Before deploying a prompt change that performed well on five test cases, the practitioner must:

a. Run the full evaluation set first ✓
b. Wait one week to observe stability
c. Deploy immediately — five cases is enough
d. Ask the team for subjective review

The correct answer is: Run the full evaluation set first

Question 10

Flag question

Incorrect Mark 0.00 out of 1.00

A/B prompt comparison requires:

a. Running on different user segments weekly
b. One change at a time on the same eval set
c. Human preference as the sole metric ✗
d. Different eval subsets for each version

The correct answer is: One change at a time on the same eval set

Question 11

Flag question

Incorrect Mark 0.00 out of 1.00

A shared team prompt library primarily:

a. Eliminates the need for evaluation runs
b. Eliminates need for individual evaluation ---------- ✗
c. Ensures all team prompts are identical
d. Satisfies Anthropic audit requirements

The correct answer is: Eliminates the need for evaluation runs

Question 12

Flag question

Incorrect Mark 0.00 out of 1.00

Inconsistent prompt results across multiple runs most commonly indicate:

a. The context window is too small
b. The system prompt contains conflicts ⊗
c. Temperature is above zero — expected probabilistic variance
d. The model tier is insufficient

The correct answer is: Temperature is above zero — expected probabilistic variance

Question 13

Flag question

Incorrect Mark 0.00 out of 1.00

A prompt that performs well on crafted test inputs but poorly in production reveals that:

a. Users are submitting out-of-scope queries ⊗
b. The model tier needs upgrading for production
c. System prompts need simplification at scale
d. The eval set must reflect real input distribution

The correct answer is: The eval set must reflect real input distribution

Question 14

Flag question

Incorrect Mark 0.00 out of 1.00

What does a "prefill" in a Claude prompt do?

a. Defines default API parameter values
b. Pre-loads cached context for the session ⊗
c. Injects metadata into the API request
d. Sets the opening text of Claude's response

The correct answer is: Sets the opening text of Claude's response

Question 15

Flag question

Correct Mark 1.00 out of 1.00

A system prompt has grown excessively large. The best remediation is:

a. Migrating all instructions to fine-tuning
b. Removing instructions that don't improve eval results ✓
c. Splitting it into multiple API calls
d. Moving half of it to user messages

The correct answer is: Removing instructions that don't improve eval results

Question 16

Flag question

Correct Mark 1.00 out of 1.00

For code generation, the most critical context element to provide is:

a. The developer's experience level
b. The deployment environment details
c. The project's total codebase size
d. Language, framework, and security constraints ✓

The correct answer is: Language, framework, and security constraints

Question 17

Flag question

Incorrect Mark 0.00 out of 1.00

A golden test set is used for:

a. Anthropic's official quality certification
b. Generating few-shot examples for the system prompt ✗
c. Rapid regression detection after each change
d. Comparing Claude against competing models

The correct answer is: Rapid regression detection after each change

Question 18

Flag question

Correct Mark 1.00 out of 1.00

Prompt quality declining after six months with no changes most likely indicates:

a. The input distribution has shifted ✓
b. Temperature drifted due to a platform update
c. The model is deprioritising older system prompts
d. The API version became incompatible

The correct answer is: The input distribution has shifted

Question 19

Flag question

Correct Mark 1.00 out of 1.00

For a balanced comparison, "be neutral and objective" is less effective than asking Claude to:

a. List pros and cons in equal number
b. Consider both sides carefully
c. Avoid expressing any opinion whatsoever
d. Present the strongest case for each side ✓

The correct answer is: Present the strongest case for each side

Question 20

Flag question

Correct Mark 1.00 out of 1.00

XML tags in a complex prompt primarily:

a. Trigger special Claude processing modes
b. Create clear boundaries between content types ✓
c. Enable parallel section processing
d. Compress the total token count used

The correct answer is: Create clear boundaries between content types
