Question 1

Flag question

Correct Mark 1.00 out of 1.00

Claude's context window size determines:

a. How many users can share a deployment
b. How long Claude can maintain a session
c. How much input can be sent per request ✓
d. The maximum number of tool calls allowed

The correct answer is: How much input can be sent per request

Question 2

Flag question

Incorrect Mark 0.00 out of 1.00

An organisation that previously used Claude.ai Pro wants to integrate Claude into their product. The required change is:

a. Upgrading to Claude.ai Teams plan ✗
b. Requesting developer mode on their account
c. Switching from Claude.ai to the Claude API
d. Enabling API access within Claude.ai Pro

The correct answer is: Switching from Claude.ai to the Claude API

Question 3

Flag question

Correct Mark 1.00 out of 1.00

A practitioner wants to use Claude for a task but is unsure if the quality will be sufficient. The correct first step is:

a. Consulting Anthropic's documentation only
b. Running a small pilot on representative inputs with defined quality metrics ✓
c. Building the full integration then testing
d. Selecting Opus to maximise quality

The correct answer is: Running a small pilot on representative inputs with defined quality metrics

Question 4

Flag question

Correct Mark 1.00 out of 1.00

A healthcare company must keep patient data within specific geographic boundaries. This requirement is called:

a. Data encryption at rest
b. Access control and authentication
c. Purpose limitation under GDPR
d. Data residency or sovereignty ✓

The correct answer is: Data residency or sovereignty

Question 5

Flag question

Incorrect Mark 0.00 out of 1.00

When a pre-built AI product and a custom API integration both meet requirements equally, the decision should favour:

a. The custom build for maximum control ✗
b. The pre-built product for team familiarity
c. The option with lower total cost of ownership
d. The option with more community support

The correct answer is: The option with lower total cost of ownership

Question 6

Flag question

Incorrect Mark 0.00 out of 1.00

A developer must choose between streaming and synchronous API calls for a reporting tool. The key deciding factor is:

a. Whether the model supports streaming mode
b. Whether the report contains images or only text
c. Whether reports are viewed in real time or generated and saved ⊗
d. Whether the system prompt is longer than 2,000 tokens

The correct answer is: Whether the report contains images or only text

Question 7

Flag question

Correct Mark 1.00 out of 1.00

A model that performs well on a competitor's benchmark may still fail a specific use case because:

a. Benchmarks are not updated frequently enough
b. Benchmarks always favour the sponsoring company's model
c. Benchmarks measure generalised tasks not the specific use case ✓
d. Benchmarks use different API versions

The correct answer is: Benchmarks measure generalised tasks not the specific use case

Question 8

Flag question

Correct Mark 1.00 out of 1.00

A practitioner wants to reduce input token cost for a system with a 10,000-token system prompt used across thousands of daily requests. The most direct solution is:

a. Apply prompt caching to the system prompt ✓
b. Use a smaller model to process inputs faster
c. Reduce the system prompt to 1,000 tokens
d. Switch to the Batches API for all requests

The correct answer is: Apply prompt caching to the system prompt

Question 9

Flag question

Correct Mark 1.00 out of 1.00

A use case involves autonomous agents taking actions in external systems. Compared to simple generation, this requires additionally:

a. A separate API key per agent instance
b. Disabling streaming mode entirely
c. A higher-capability model always
d. Human-in-the-loop controls for consequential actions ✓

The correct answer is: Human-in-the-loop controls for consequential actions

Question 10

Flag question

Correct Mark 1.00 out of 1.00

Claude's native multimodal capability allows:

a. Video frame extraction and analysis
b. Images and text processed together in one request ✓
c. Real-time screen capture and annotation
d. Audio transcription within the API

The correct answer is: Images and text processed together in one request

Question 11

Flag question

Correct Mark 1.00 out of 1.00

The Batches API result retrieval uses:

a. Polling or a provided results endpoint after processing completes ✓
b. Streaming delivery of each result
c. Webhooks pushed immediately on completion
d. WebSocket connections for live updates

The correct answer is: Polling or a provided results endpoint after processing completes

Question 12

Flag question

Incorrect Mark 0.00 out of 1.00

Claude.ai differs from the API in that it:

a. Has no usage restrictions or message limits
b. Provides a ready-to-use interface without integration work ⊗
c. Allows custom system prompts to be saved
d. Offers access to more powerful models

The correct answer is: Offers access to more powerful models

Question 13

Flag question

Incorrect Mark 0.00 out of 1.00

What appears in a "thinking" content block when extended thinking is enabled?

a. The tool calls Claude considered
b. A structured decision tree output ⊗
c. Claude's internal reasoning before answering
d. Source citations for the response

The correct answer is: Claude's internal reasoning before answering

Question 14

Flag question

Correct Mark 1.00 out of 1.00

A practitioner is building a solution for a use case that may grow from 100 to 100,000 requests per day within six months. The most important architectural consideration is:

a. Designing for scale from the start with queuing and async patterns ✓
b. Building for current needs only and refactoring when required
c. Securing an enterprise API contract immediately
d. Using the cheapest model now and upgrading later

The correct answer is: Designing for scale from the start with queuing and async patterns

Question 15

Flag question

Correct Mark 1.00 out of 1.00

Claude Code requires explicit user confirmation before taking which type of action?

a. Executing commands with irreversible effects ✓
b. Reading files in the repository
c. Searching within a codebase
d. Generating code suggestions in a chat

The correct answer is: Executing commands with irreversible effects

Question 16

Flag question

Incorrect Mark 0.00 out of 1.00

When evaluating whether to use the Batches API, the most relevant question is:

a. Whether the model tier supports batching
b. Whether the system prompt is under 4,000 tokens
c. Whether responses can wait for async processing ✗
d. Whether the task involves sensitive data

The correct answer is: Whether the model tier supports batching

Question 17

Flag question

Incorrect Mark 0.00 out of 1.00

An integration sends the same large policy document with every request. Prompt caching should be applied to:

a. The output to avoid regenerating responses ✗
b. The user messages to reduce repetition
c. The tool definitions in the request
d. The policy document prefix in each request

The correct answer is: The policy document prefix in each request

Question 18

Flag question

Correct Mark 1.00 out of 1.00

A two-stage pipeline needs fast intent classification then detailed generation. The optimal model assignment is:

a. Haiku for both to minimise cost
b. Opus for both to ensure quality
c. Haiku for classification, Sonnet for generation ✓
d. Sonnet for both as a balanced choice

The correct answer is: Haiku for classification, Sonnet for generation

Question 19

Flag question

Correct Mark 1.00 out of 1.00

Extended thinking mode is activated by:

a. Enabling the reasoning flag in headers
b. Using the thinking API parameter with a budget_tokens value ✓
c. Setting temperature to zero
d. Selecting the Opus model tier

The correct answer is: Using the thinking API parameter with a budget_tokens value

Question 20

Flag question

Correct Mark 1.00 out of 1.00

When the same Claude integration is used by teams across multiple departments, the most scalable architecture uses:

a. Manual prompt updates as each team requests them
b. Separate Claude accounts per department
c. One universal system prompt for all teams
d. Dynamic system prompt composition per department from a shared template ✓

The correct answer is: Dynamic system prompt composition per department from a shared template
