Question 1

Flag question

Correct Mark 1.00 out of 1.00

After six months, an eval dataset should be refreshed because:

a. Anthropic's scoring algorithms change every six months
b. The eval tool licensing requires renewal
c. Real production inputs have evolved and the dataset may no longer represent them
d. Model versions expire after six months

The correct answer is: Real production inputs have evolved and the dataset may no longer represent them

Question 2

Flag question

Correct Mark 1.00 out of 1.00

A practitioner adds "be accurate" to the system prompt to reduce hallucinations. This is ineffective because:

a. Claude already tries to be accurate by default
b. The instruction is too short to be processed
c. System prompts do not affect factual accuracy
d. Aspirational instructions cannot change what knowledge Claude has access to

The correct answer is: Aspirational instructions cannot change what knowledge Claude has access to

Question 3

Flag question

Correct Mark 1.00 out of 1.00

Claude uses correct terminology but describes a process that does not exist. This is:

a. A temperature artefact at high settings
b. A domain hallucination requiring expert review ✓
c. A format compliance failure
d. A register mismatch error

The correct answer is: A domain hallucination requiring expert review

Question 4

Flag question

Correct Mark 1.00 out of 1.00

Evaluating factual accuracy in Claude outputs requires:

a. Running outputs through a grammar checker
b. Verifying the model version used
c. Comparing claims against authoritative external sources ✓
d. Checking outputs match the average response length

The correct answer is: Comparing claims against authoritative external sources

Question 5

Flag question

Correct Mark 1.00 out of 1.00

Confidence calibration means Claude:

a. Refuses uncertain questions entirely
b. Always responds with high confidence
c. Uses more hedging words in all responses
d. Expresses uncertainty proportional to its actual reliability on each claim ✓

The correct answer is: Expresses uncertainty proportional to its actual reliability on each claim

Question 6

Flag question

Correct Mark 1.00 out of 1.00

A Claude output contains accurate information but excessive unsolicited caveats. The fix is:

a. Reducing the max_tokens limit
b. Upgrading to a more capable model tier
c. Lowering the temperature parameter
d. Adding explicit instructions specifying when caveats are appropriate ✓

The correct answer is: Adding explicit instructions specifying when caveats are appropriate

Question 7

Flag question

Correct Mark 1.00 out of 1.00

The defining characteristic of a mature troubleshooting process is:

a. A closed loop from problem detection through fix validation and deployment ✓
b. Escalation to Anthropic for all failures
c. Fast resolution time for all issue types
d. Automated resolution without human review

The correct answer is: A closed loop from problem detection through fix validation and deployment

Question 8

Flag question

Incorrect Mark 0.00 out of 1.00

A practitioner implements fixes for three known failure patterns simultaneously. The risk is:

a. Regressions in one fix cannot be separated from the others ✗
b. The combined changes cannot be stored in version control
c. The API cannot handle compound prompt changes
d. The context window shrinks with more instructions added

The correct answer is: The combined changes cannot be stored in version control

Question 9

Flag question

Correct Mark 1.00 out of 1.00

A deployment improves significantly after adding real production inputs to the eval set. This confirms:

a. The original eval set was not representative of production inputs
b. The model tier needed upgrading
c. The API version was incompatible
d. Temperature was incorrectly set

The correct answer is: The original eval set was not representative of production inputs

Question 10

Flag question

Correct Mark 1.00 out of 1.00

An evaluation programme consistently measures but never drives system changes. The result is:

a. Measurement without improvement — the feedback loop is broken
b. The system gradually improves on its own
c. Evaluation becomes more accurate over time
d. The team saves resources by not rebuilding

The correct answer is: Measurement without improvement — the feedback loop is broken

Question 11

Flag question

Correct Mark 1.00 out of 1.00

Tracking prompt version in every API request log enables:

a. Correlating quality metrics to specific prompt versions
b. Automatically rolling back poor-performing changes
c. Sharing prompts securely across teams
d. Encrypting prompt content in transit

The correct answer is: Correlating quality metrics to specific prompt versions

Question 12

Flag question

Correct Mark 1.00 out of 1.00

Outputs vary significantly in length across similar queries. The targeted fix is:

a. Switching to a faster model tier
b. Enabling streaming to monitor generation
c. Adding explicit length constraints with a compliance example ✓
d. Reducing temperature to zero always

The correct answer is: Adding explicit length constraints with a compliance example

Question 13

Flag question

Correct Mark 1.00 out of 1.00

Claude drifts from constraints in long conversations. The most effective mitigation is:

a. Switching to the Batches API instead
b. Restarting the session every ten turns
c. Storing constraints in user messages only
d. Adding examples showing constraint adherence on complex long-session inputs ✓

The correct answer is: Adding examples showing constraint adherence on complex long-session inputs

Question 14

Flag question

Correct Mark 1.00 out of 1.00

A Claude output on a medical topic sounds authoritative but contains a critical error. The governance response is:

a. Switching to a more capable model tier
b. Reducing temperature on medical queries
c. Adding a disclaimer to all medical outputs
d. Requiring qualified professional review before medical outputs reach users ✓

The correct answer is: Requiring qualified professional review before medical outputs reach users

Question 15

Flag question

Correct Mark 1.00 out of 1.00

The most valuable output of running an eval suite is:

a. An overall quality score for reporting
b. A specific failure pattern diagnosis enabling targeted improvement ✓
c. A ranked list of best outputs for examples
d. A compliance certificate for governance

The correct answer is: A specific failure pattern diagnosis enabling targeted improvement

Question 16

Flag question

Correct Mark 1.00 out of 1.00

A deployment's quality is strong on average but a specific user segment reports poor results. The analysis technique required is:

a. Switching to human preference ratings
b. Running the full eval suite again
c. Increasing the overall eval dataset size
d. Sliced evaluation — breaking metrics down by the affected segment ✓

The correct answer is: Sliced evaluation — breaking metrics down by the affected segment

Question 17

Flag question

Correct Mark 1.00 out of 1.00

The correct order for prompt improvement is:

a. Deploy → monitor → diagnose → fix
b. Diagnose failure → targeted fix → regression eval → deploy ✓
c. Fix → deploy → diagnose → eval
d. Eval → deploy → fix → diagnose

The correct answer is: Diagnose failure → targeted fix → regression eval → deploy

Question 18

Flag question

Correct Mark 1.00 out of 1.00

A practitioner changes multiple prompt elements simultaneously. The problem is:

a. The context window shrinks with more elements
b. Quality changes cannot be attributed to any specific element changed ✓
c. Each element takes longer to test
d. The API charges extra for compound changes

The correct answer is: Quality changes cannot be attributed to any specific element changed

Question 19

Flag question

Correct Mark 1.00 out of 1.00

The instruction "if you cannot find the answer in the provided documents, say so" primarily:

a. Improves retrieval precision in the index
b. Reduces API token usage per request
c. Prevents fabrication when source documents don't cover the query ✓
d. Speeds up response generation time

The correct answer is: Prevents fabrication when source documents don't cover the query

Question 20

Flag question

Correct Mark 1.00 out of 1.00

A practitioner notices Claude fabricates specific citations confidently. The most direct fix is:

a. Grounding responses in retrieved documents and instructing Claude to cite only those ✓
b. Reducing temperature to zero
c. Switching to extended thinking mode
d. Adding "only cite sources you are certain about" to the system prompt

The correct answer is: Grounding responses in retrieved documents and instructing Claude to cite only those
