Question #1 (Topic: Exam A) *Topic 1*

A learning specialist is configuring a Project for course-design work. Their organization has an internal instructional-design standard and a preferred output structure for lesson outlines.
Which custom-instruction set best supports this use case?

A. Name Claude's role as a course designer; let each chat's prompt specify the standards and output structure for that lesson, since lessons vary widely.

B. Name Claude's role as a course designer and require alignment to the organization's instructional-design standards; leave output structure to Claude based on the topic of each lesson.

C. Specify only the preferred output structure for lesson outlines, since the structure carries the standards implicitly and naming the role adds no value.

D. Name Claude's role as a course designer, require alignment to the organization's instructional-design standards, and specify the preferred output structure for lesson outlines. **Most Voted**

Correct Answer: D

Question #2 (Topic: Exam A) *Topic 1*

You are a project manager reviewing stakeholder messages that teammates have drafted about Claude's role in a workflow. Which two messages are appropriate for stakeholder communication about Claude? (Choose two.)
Each correct answer presents part of the solution.

A. a claim that the model never makes errors and requires no quality review

B. a vague reassurance that "the AI is taking care of it" without further detail

C. a claim that Claude will handle every task without any human involvement

D. a clear statement of the limits and known failure modes of the integration

E. an honest description of where Claude assists and where humans retain decisions

Correct Answer: DE

Question #3 (Topic: Exam A) *Topic 1*

You are reviewing a Claude-generated competitor brief for unsupported claims.
Which is the correct order of review steps?
(1) Cross-check each specific claim against the supplied source material or trusted external references.
(2) Decide whether to correct, re-prompt, or escalate based on findings.
(3) Document each unsupported or inconsistent claim with location and severity.
(4) Identify the specific factual claims, statistics, and citations in the brief.
(5) Read the brief end to end and flag any claims that feel surprising.

A. 1, 4, 5, 3, 2

B. 4, 5, 1, 3, 2

C. 5, 1, 4, 3, 2

D. 5, 4, 1, 3, 2

Correct Answer: D

Question #4 (Topic: Exam A) *Topic 1*

You are designing a checklist for evaluating Claude outputs and must complete the upstream steps before scoring an output. Which two steps must be completed BEFORE scoring a Claude output against the checklist? (Choose two.)
Each correct answer presents part of the solution.

A. Define the evaluation criteria that matter for the task at hand.

B. Promote the approved output into the downstream production process.

C. Forward unacceptable outputs to a senior reviewer for second-pass review.

D. Specify the threshold that distinguishes acceptable from unacceptable output.

E. Document the final score and the reviewer comments for the audit trail.

Correct Answer: AD

Question #5 (Topic: Exam A) *Topic 1*

You are a business analyst deciding which output formatting and context-window practices to recommend to teammates. Which two practices represent effective use of the context window? (Choose two.)
Each correct answer presents part of the solution.

A. Reuse the same context block across multiple requests to avoid rebuilding it each time.

B. Concatenate all source documents end-to-end with no separators between them.

C. Paste full email threads related to the project into context so the model has complete conversational history.

D. Trim irrelevant material before submitting the request to keep context focused.

E. Use clear section headers to separate different parts of the input material.

Correct Answer: DE

Question #6 (Topic: Exam A) *Topic 1*

Preparing an AI-assisted work product for external delivery, a senior manager is applying the AI Fluency Framework Diligence competency. Which step best reflects Diligence principles?

A. Deliver the work product without independent verification on the basis that AI assistance shifts accountability away from the human, even though Diligence holds the human fully accountable for the output.

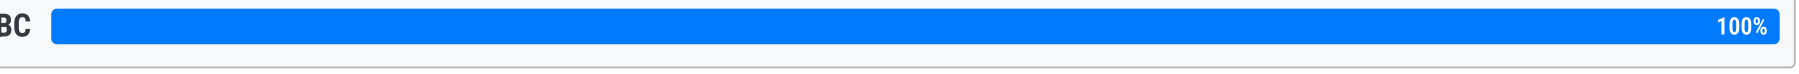

B. Delegate accountability for the AI-assisted work product to Claude itself rather than retaining it as a human obligation, contrary to the Diligence principle that humans remain accountable for AI-assisted outputs.

C. Skip verification of any element on the assumption that fluent output implies accuracy, even though Diligence requires the human to verify and correct AI-assisted outputs before they are acted upon.

D. Identify the elements of the work product that must be independently verified or corrected before delivery, and take ownership of those verifications as a professional accountability obligation. **Most Voted**

Question #7 (Topic: Exam A) *Topic 1*

You are reviewing claims about prompt iteration that colleagues have made in a recent training. Which two claims about prompt iteration are accurate? (Choose two.)
Each correct answer presents a complete solution.

A. Repeated resubmission of the same prompt is the most reliable way to improve output.

B. Output comparison against original criteria validates whether iteration helped.

C. Iteration is most productive when each change targets a specific diagnosed weakness.

D. Iteration should stop only after every possible alternative phrasing has been tried.

E. More iterations always produce a better output regardless of what was changed.

Question #8 (Topic: Exam A) *Topic 1*

A Claude associate is reviewing a Claude-drafted set of customer-segment descriptions for an internal marketing brief. One description applies a generalization about a demographic group's purchasing behavior that does not hold for individual customers in the segment.
Which response is most appropriate?

A. Revise the description to focus on observed behaviors rather than generalizations about people, and validate the revision against actual customer data.

B. Remove the entire customer-segment description from the brief, since any segmentation that involves demographic characteristics is likely to introduce similar issues.

C. Keep the description as written for the internal brief, since internal use does not carry the same risk as external publication of demographic generalizations.

D. Add a disclaimer to the description, noting that the generalization may not apply to all individuals in the segment, and keep the underlying description unchanged. Most Voted

Correct Answer: A

D 100%

Question #9 (Topic: Exam A) *Topic 1*

You are running an optimization pass on a recurring workflow.
Which is the correct order of optimization steps?
(1) Apply targeted optimization to the bottleneck step
(2) Roll out the optimized workflow to the broader team and document the change
(3) Identify the bottleneck step using measured time per step and queue length
(4) Map the current workflow steps, owners, and decision points
(5) Pilot the change with a small group and measure the effect against the prior baseline

A. 4, 1, 3, 5, 2

B. 4, 3, 1, 5, 2

C. 3, 4, 1, 5, 2

D. 1, 4, 3, 5, 2

Correct Answer: B

Question #10 (Topic: Exam A) *Topic 1*

You are a customer-success lead running an interactive workflow where each turn must respond quickly and the per-turn reasoning is light. Which selection best aligns to the requirements?

A. Choose any model because latency does not vary by model.

B. Choose Haiku to keep latency low and to handle a light reasoning load efficiently at scale. **Most Voted**

C. Choose Opus to maximize reasoning depth despite higher latency.

D. Choose a model based on the alphabetical order of its name.
