Question #21 (Topic: Exam A) *Topic 1*

An account manager has used Claude to extract requirements from stakeholder notes. Three requirements appear to conflict: two stakeholders specified mutually exclusive workflow steps, and a third requirement assumes an outcome the first two would prevent.
Which step is most appropriate?

A. Present all three conflicting requirements as alternative options in the requirements document, leaving the resolution to the project's decision-making process later.

B. Apply Claude to propose a compromise wording for each conflict and submit the compromise to stakeholders as the proposed resolution.

C. Select the requirement that has the strongest business justification in the source notes, set the conflicting requirements aside, and proceed with the selected one.

D. Flag the conflicts in the requirements document, document the source for each side, and route the conflicts back to the originating stakeholders for resolution.

Correct Answer: D

Question #22 (Topic: Exam A) *Topic 1*

A knowledge worker is explaining the cost, speed, and quality trade-offs across Claude models to a colleague. Which generalization correctly describes the trade-off?

A. Speed and rate-limit consumption are independent of model capability; the difference between Haiku, Sonnet, and Opus is reasoning depth alone.

B. More capable models generally consume more of the rate limit and run more slowly, while lighter models are faster and consume less of the rate limit.

C. More capable models generally consume less of the rate limit because their reasoning is more efficient, even though they run more slowly than lighter models.

D. Lighter models consume more of the rate limit per request than more capable models, since lighter models require multiple passes to match heavier-model quality.

Correct Answer: B

Question #23 (Topic: Exam A) *Topic 1*

A finance manager must select a Claude feature for a task that requires deterministic calculations across a multi-tab spreadsheet. Which selection best fits the requirement?

A. Use an Artifact alone for the calculations, which provides a stable editable surface for the result but does not perform the deterministic computation that Code Execution would run.

B. Use Code Execution, which runs code in a sandbox to perform calculations on the uploaded file and produce verified outputs the associate can check. Most Voted

C. Use the Research feature for the calculations, which gathers and synthesizes external sources and is not the appropriate feature for deterministic computation on an uploaded spreadsheet.

D. Use a standard chat prompt for the calculations, which generates text without running code and does not produce the verified deterministic output the multi-tab calculation task requires.

Correct Answer: B

Question #24 (Topic: Exam A) *Topic 1*

A Claude associate is troubleshooting a Claude response that addressed only one of three required questions in a prompt. The prompt listed all three questions in a single paragraph separated by commas.
Which root cause is most likely?

A. The prompt was too long and Claude focused on the question with the strongest grounding in the surrounding context.

B. The prompt's required questions were addressed implicitly across the response, even though the response did not visibly answer each question.

C. The prompt's task statement did not enumerate the three required questions explicitly enough for Claude to address each one in turn.

D. The prompt's audience and tone specification overshadowed the task statement, so Claude prioritized voice over coverage.

Correct Answer: C

Question #25 (Topic: Exam A) *Topic 1*

A sales manager is iterating on a Claude-generated solution prototype after a stakeholder review identified two specific concerns. The rest of the prototype was accepted as written.
Which iteration approach is most likely to produce a strong next version?

A. Rewrite the prototype from scratch incorporating the two specific concerns, since starting fresh integrates the feedback more cleanly than targeted edits.

B. Address the two specific concerns and add a third improvement the associate identified, since combining stakeholder feedback with self-identified improvements is more efficient.

C. Address the two specific concerns directly, leave unrelated parts unchanged, and document the changes for the next review. **Most Voted**

D. Address the two specific concerns and also revise unrelated sections to maintain consistent voice across the prototype after the edits.

Correct Answer: C

Question #26 (Topic: Exam A) *Topic 1*

You are a senior analyst using Claude to analyze requirements from several stakeholder sources.
Which is the correct order of steps?
(1) Group related requirements and flag conflicts or ambiguities for stakeholder review.
(2) Validate the structured output against the original sources for accuracy and completeness.
(3) Submit the consolidated inputs to Claude with a structured extraction prompt.
(4) Gather and label the source materials so each requirement can be traced.
(5) Document the final requirements set with source traceability and status.

A. 4, 1, 3, 2, 5 **Most Voted**

B. 4, 3, 1, 2, 5

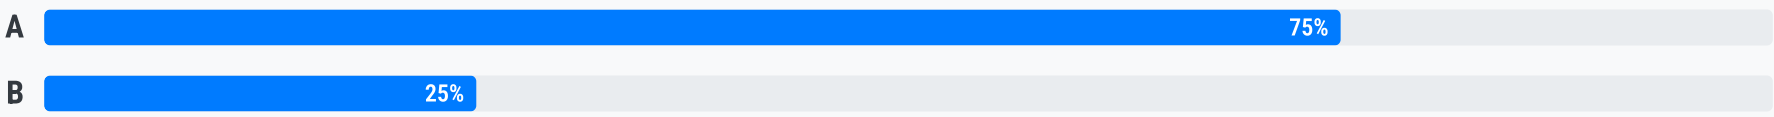

C. 1, 4, 3, 2, 5

D. 3, 4, 1, 2, 5

Correct Answer: A

Question #27 (Topic: Exam A) *Topic 1*

You are evaluating whether a “redesign new-hire onboarding” request should be decomposed before prompting Claude. Which feature of the request most strongly indicates decomposition will help?

A. The request is for a single structured document that can be produced from one set of inputs in one prompt.

B. The request requires multiple distinct outputs: a process map, supporting materials, and a measurement plan.

C. The request involves a single well-defined output with a clear input and a familiar format.

D. The request involves content the associate has produced many times before and knows can be handled in a single well-structured prompt.

Correct Answer: B

Question #28 (Topic: Exam A) *Topic 1*

You are a procurement associate decomposing a vendor-evaluation task. Which dependency ordering reflects sound sequencing?

A. Define evaluation criteria first, gather vendor data against those criteria, then score and rank.

B. Rank vendors before any data is collected.

C. Score vendors first and decide on the criteria afterward.

D. Skip criteria and ask Claude to produce a vendor recommendation from no inputs.

Correct Answer: A

Question #29 (Topic: Exam A) *Topic 1*

You are a marketing manager using Claude to ideate concepts for a campaign and must complete the framing steps before generating concepts. Which two framing steps must be completed BEFORE asking Claude to generate concepts? (Choose two.)
Each correct answer presents part of the solution.

A. Select a finalist concept and prepare it for stakeholder approval.

B. Define the goal of the campaign and the success metrics for the campaign.

C. Review the Claude-generated concepts and select the two strongest for further development. D. Schedule the campaign launch and the rollout dates with the agency.

E. Define the brand voice and the audience the concepts will speak to.

Correct Answer: BE

Question #30 (Topic: Exam A) *Topic 1*

You are a knowledge worker deciding whether to escalate a Claude-generated output.

Which is the correct order of decision steps?

(1) Identify the audience and the impact of the output if it is wrong.

(2) Document the decision and the rationale for traceability.

(3) Compare the output's risk profile to the organization's escalation criteria.

(4) Decide whether to use, iterate further, or escalate.

(5) Assess the output's accuracy, completeness, and any unverified claims.

A. 5, 1, 3, 4, 2

B. 3, 1, 5, 4, 2

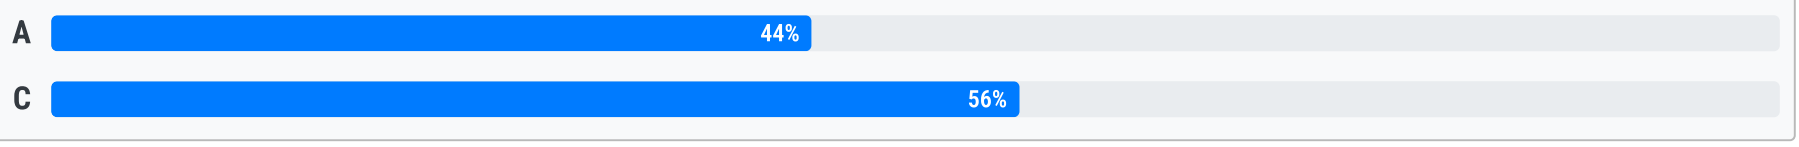

C. 1, 5, 3, 4, 2 **Most Voted**

D. 1, 3, 5, 4, 2

Correct Answer: C
